

Florida Lake Shepherds, LLC

FACT SHEET

From the lakes, to the rivers, to the bays, to the aquatic preserves, to the Atlantic Ocean and the Gulf of Mexico, Florida's Wildlife is being systematically destroyed by the FWC and FAPMA

CAUSE: FAPMS lobbying and the passage of the "Florida Aquatic Weed Control Act" (2010 Fla. Statute . 369.20) . Passed Nov. 17, 2010.

WARNING: The Univ. of Fla in 2009, warned that the application of the poison' Diquat' "is ineffective in muddy waters." because diquat is strongly cationic and so quickly adsorbs to and is tightly held by negative charges of clay and peat; "MUDDY LAKES / MUDDY WATERS

WARNING: Wisconsin DNR in 2012, "Diquat binds with the organic matter indefinitely, **it does not degrade and will accumulate in the sediments.**

WARNING: Wikipedia says about Diquat: "it bonds strongly to mineral and organic particles in soil and water . where it remains without significant degradation for years."

FAPMS: Who is FAPMS? FAPMS is the Florida Aquatic Plant Management Society. A Political and Lobbying Society that runs the **FWC's Poison Spraying Program**. Their Officers and Board Members are mainly employees of **Federal, State, and local Government Agencies, Chemical Companies and Applicators, the Univ. of Fla., ARMY Corp. of Eng., and businesses that develop and promote these deadly poisons.** Anyone can join just GOOGLE FAPMS

FWC and FAPMS know that they are destroying Florida's Waterways and Wildlife, but they are more interested in protecting their MONEY CHAIN than protecting Florida's WATERWAYS and WILDLIFE. They promote lies like, growth and fertilizers are killing the environment. **NO!!! It's There "MONEY before WILDLIFE" Poison Program.**

After 40+ years of dumping MILLIONS of gallons of poisons into Florida's waterways, the poisons have reached the inside and outside coastlines and beaches. The poisons that have binded with mudding organic matter, are now being FLUSHED into the inside and outside of Florida's coastlines and beaches with Hurricanes and severe weather. This organic matter is the FWC/FAPMS's smorgasbord to Algae, Red Tide, and Dead Sea Grasses. Tampa Bay has lost 6,000 acres of SeaGrass beds and 2,000 STARVING MANATEES. The FWC/FAPMS blames growth and fertilizers on the DEAD MANATEES, but that is a LIE. THE DEAD MANATEE PROBLEM starts with every POISON application in Florida's Lakes and Waterways.

FUTURE FORECAST: DANGER NO SWIMMING ALLOWED...Dead Manatees, Dead Lakes, Dead Wildlife, Dead Lake Grasses, NO WILDLIFE NURSERIES...WHY? NO HYDRILLA

STUPID IS THAT FWC/FAPMS DOES...STUPID IS THAT FWC/FAPMS DOES...STUPID IS
